Laminated steel sheets for food packaging refer to a type of steel sheet coated with a layer of material, such as plastic or aluminum, to enhance its durability, corrosion resistance, and safety in contact with food. These laminated sheets are commonly used for food cans, containers, and other packaging products, providing an effective barrier against moisture, air, and contaminants. The laminated coating ensures the steel does not react with the food, preserving taste, freshness, and quality. Additionally, it helps meet health and safety standards by preventing harmful interactions between the packaging material and food contents.
