The global Laminated Transformer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Laminated transformer is a special type of transformer, which is made of multiple laminated iron cores. Its transformer core is composed of multiple insulated iron sheets laminated, and each layer is separated by insulating materials, which can reduce magnetic flux leakage and magnetic resistance, and improve the efficiency and performance of the transformer. Laminated transformers have the characteristics of high efficiency, low noise, and low loss. It adopts the superposition of multiple layers of iron chips, which can effectively reduce magnetic flux leakage and magnetic resistance, thereby improving the efficiency and performance of the transformer. In addition, laminated transformers also have the advantages of small size, light weight, and high reliability, and are suitable for various load types and working environments.
