Laminator for FPC is a machine used to apply a layer of laminate material onto flexible printed circuit boards. It protects the circuits, enhances durability, and improves performance. The machine consists of a laminating station, control panel, conveyor belt, guide rails, and exhaust system. The FPC board is loaded onto the conveyor belt, laminating parameters are set on the control panel, and the laminating process begins. Once complete, the board is removed and allowed to cool. Choosing the right laminator is important based on board specifications and desired production capacity.
