According to our (Global Info Research) latest study, the global LAN Chips market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

LAN chips provide wireless local area network (LAN) connectivity in a system-on-chip platform. A LAN chip is a device on an Ethernet network that broadcasts information and provides Ethernet functions, including PHYceivers and media access control (MAC). Ethernet is a system for connecting computers within a building by using hardware running from machine to machine. The hardware that connects the computers are LAN chips and wiring. LAN chips can also encrypt and decrypt packets as they are sent or received without increasing latency for unencrypted packets.
