## Abstracts

The global LAN Chips market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

LAN chips provide wireless local area network (LAN) connectivity in a system-on-chip platform. A LAN chip is a device on an Ethernet network that broadcasts information and provides Ethernet functions, including PHYceivers and media access control (MAC). Ethernet is a system for connecting computers within a building by using hardware running from machine to machine. The hardware that connects the computers are LAN chips and wiring. LAN chips can also encrypt and decrypt packets as they are sent or received without increasing latency for unencrypted packets.

This report studies the global LAN Chips production, demand, key manufacturers, and key regions.
