## Abstracts

According to our (Global Info Research) latest study, the global Land-Based Aquaculture System market size was valued at USD 4331.9 million in 2022 and is forecast to a readjusted size of USD 9105.9 million by 2029 with a CAGR of 11.2% during review period.

The land-based aquaculture system is a new type of aquaculture model. It uses a controlled land-based circulating water high-efficiency breeding system for factory farming. It realizes the monoculture of multiple species of fish, and can adjust the breeding structure in time according to market changes, reducing costs. breeding risks. At the same time, the fish breeding cycle is shortened, and the output is 5 times or even higher than that of traditional breeding methods.

With the continuous development of land-based aquaculture systems, future farms may tend to operate on a large scale, reducing costs and improving benefits by integrating resources and improving production efficiency.
