Abstracts

The global Land-Based Aquaculture System market size is expected to reach \$ 9105.9 million by 2029, rising at a market growth of 11.2% CAGR during the forecast period (2023-2029).

With the continuous development of land-based aquaculture systems, future farms may tend to operate on a large scale, reducing costs and improving benefits by integrating resources and improving production efficiency.

The land-based aquaculture system is a new type of aquaculture model. It uses a controlled land-based circulating water high-efficiency breeding system for factory farming. It realizes the monoculture of multiple species of fish, and can adjust the breeding structure in time according to market changes, reducing costs. breeding risks. At the same time, the fish breeding cycle is shortened, and the output is 5 times or even higher than that of traditional breeding methods.
