Abstracts

Recirculating Aquaculture Systems (RAS) allow fish to be farmed in net cages or tanks instead of open-air ponds. These systems allow high-density fish production within a breeding environment that is controllable by the operator of the facility. The filters of the recirculating system clean and recycle the water, sending it back to the tanks. New water is only added to the tanks to compensate for water lost due to splashing and evaporation, and to replace that used to remove waste materials. Recirculating systems can be used to produce both fresh- and saltwater species, including rainbow trout, salmon, catfish, whiteleg shrimp, eel, turbot etc.

According to our (Global Info Research) latest study, the global Land-based RAS Aquaculture market size was valued at US\$ 5490 million in 2023 and is forecast to a readjusted size of USD 9342 million by 2030 with a CAGR of 8.0% during review period.

Global key players of recirculating aquaculture system include Skretting, Xylem, RADAQUA, PR Aqua, AquaMaof, etc. The top five players hold a share over 10%.
