Abstracts

According to our (Global Info Research) latest study, the global Land Grid Array (LGA) Packaging market size was valued at US\$ 452 million in 2024 and is forecast to a readjusted size of USD 728 million by 2031 with a CAGR of 7.1% during review period.

LGA (Land Grid Array Package) is a BGA packaging technology that further reduces the height without solder balls. LGA has thinner and lighter package outline. It is especially suitable for application that required high electrical performance.

The global market for semiconductor was estimated at US\$ 579 billion in the year 2022, is projected to US\$ 790 billion by 2029, growing at a CAGR of 6% during the forecast period. Although some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.76%, Sensor with 16.31%, and Logic with 14.46% growth, Memory declined with 12.64% year over year. The microprocessor (MPU) and microcontroller (MCU) segments will experience stagnant growth due to weak shipments and investment in notebooks, computers, and standard desktops. In the current market scenario, the growing popularity of IoT-based electronics is stimulating the need for powerful processors and controllers. Hybrid MPUs and MCUs provide real-time embedded processing and control for the topmost IoT-based applications, resulting in significant market growth. The Analog IC segment is expected to grow gradually, while demand from the networking and communications industries is limited. Few of the emerging trends in the growing demand for Analog integrated circuits include signal conversion, automotive-specific Analog applications, and power management. They drive the growing demand for discrete power devices.
