## Abstracts

Land mobile wireless systems are communication systems used by local, tribal, federal, state, territorial emergency responders, public companies, and even the military for backing voice and low-speed data communications. These systems consist of a network, mobile radios, handheld portable radios, wireless base stations, and repeaters. These systems are classified into two major technologies, such as digital and analog, which are used across transportation, military, commercial, construction, and utility applications.

The rapidly growing significance of efficient mission-critical communication operations; and increasing demand for land mobile wireless systems in military, defense, and transportation applications drive the market growth. In addition, growth in demand for inexpensive, reliable, and better quality land mobile wireless systems and change over time from conventional, analog voice service (e.g., two-way communications) to complex systems incorporating digital features fuel the growth of the market. However, security issues associated with theft & alteration of mission-critical information and high cost for construction or building of land mobile wireless system restrict the market. Requirement of voice encryption for secure communication presents a major opportunity for the market.
