The global Landfill Gas Analyzer market size is expected to reach \$ 197.8 million by 2029, rising at a market growth of 9.0% CAGR during the forecast period (2023-2029).

Governments and environmental agencies worldwide have been implementing stricter regulations to control and reduce greenhouse gas emissions from landfills. These regulations have led to a greater demand for landfill gas analyzers to monitor gas emissions and ensure compliance with the standards.

Landfill gas, primarily composed of methane, can be captured and utilized as a renewable energy source. With the increasing emphasis on sustainable energy, many landfills have been exploring opportunities to convert landfill gas into electricity or heat. Landfill gas analyzers are essential for assessing the quantity and quality of gas available for energy recovery.
