According to our (Global Info Research) latest study, the global Landfill Gas Collection and Treatment market size was valued at US\$ 1788 million in 2024 and is forecast to a readjusted size of USD 2935 million by 2031 with a CAGR of 7.4% during review period.

Landfill gas collection and treatment is a process that involves the extraction, collection, and treatment of gases produced by the decomposition of organic waste materials in landfills. Landfills are sites where solid waste is disposed of and buried, and as waste decomposes over time, it produces a mixture of gases known as landfill gas. This gas primarily consists of methane (CH₄) and carbon dioxide (CO₂), along with trace amounts of other gases such as volatile organic compounds (VOCs).

Landfill gas collection systems were becoming more efficient and adaptable, incorporating advanced technologies such as vacuum extraction, horizontal wells, and radial collectors to enhance gas capture rates.
