According to our (Global Info Research) latest study, the global Landing Gear market size was valued at USD 4687.9 million in 2023 and is forecast to a readjusted size of USD 6097.9 million by 2030 with a CAGR of 3.8% during review period.

Landing gear is the undercarriage of an aircraft or spacecraft, and is used in both takeoff and landing. For aircraft, the landing gear supports the craft when it is not flying, allowing it to take off, land, and taxi without damage. Wheels are typically used but skids, skis, floats or a combination of these and other elements can be deployed depending both on the surface and on whether the craft only operates vertically (VTOL) or is able to taxi along the surface. Faster aircraft usually have retractable undercarriages, which folds away during flight to reduce air resistance or drag.

Global Landing Gear key players include UTC Aerospace Systems, H?roux-Devtek Inc, Safran Landing Systems, etc. Global top three manufacturers hold a share over 50%.
