According to our (Global Info Research) latest study, the global Landscape Architecture Service market size was valued at US\$ 475 million in 2025 and is forecast to a readjusted size of US\$ 692 million by 2032 with a CAGR of 5.4% during review period.

Landscape Architecture Service is a professional service focused on the harmonious development of the natural environment, ecosystems, and human activity spaces. It encompasses planning, design, construction, and operation support for land, vegetation, water bodies, and public spaces. Services cover urban parks, waterfront spaces, residential communities, commercial complexes, campuses, industrial parks, cultural and tourism scenic areas, and ecological restoration projects, including site analysis, master planning, landscape design, vegetation selection, stormwater management, ecological restoration, sustainable design, construction drawings, and project management.

The global Landscape Architecture Service market is closely related to urbanization, ecological environment governance, public infrastructure construction, and the demand for sustainable development. The North American and European markets are relatively mature, focusing on urban renewal, green infrastructure, sponge cities, ecological restoration, and low-carbon landscape construction. The Asia-Pacific region, driven by new urbanization, cultural and tourism development, park city construction, and large-scale public projects, is the fastest-growing region. The Middle East continues to expand its demand based on large-scale urban development and landscape engineering investment. Currently, the industry is gradually extending from traditional landscape design to ecological planning, digital design, smart gardens, stormwater management, and full life-cycle operation management. Future development trends

include design optimization based on BIM, GIS, digital twins, and artificial intelligence, as well as the construction of carbon sink landscapes, biodiversity conservation, and climate-resilient cities. The industry faces challenges such as long project cycles, significant susceptibility to fluctuations in real estate and public finance investment, a shortage of professional talent, and increasingly stringent environmental regulations. Overall, landscape architecture services are a knowledge-intensive professional service industry, with an average gross profit margin typically ranging from 25% to 45%. High-end planning and design, ecological consulting, and integrated solutions services have relatively higher gross profit margins, while construction management and engineering support services have relatively lower margins.
