Landscape Engineering Design Services is a term that refers to the professional services of landscape architects, engineers, planners and designers who work together to create functional, aesthetic and sustainable outdoor environments. Landscape Engineering Design Services can include:

Landscape Architecture: The art and science of designing outdoor spaces that are harmonious with the natural and built environment, and that meet the needs and preferences of the users. Landscape architects can create master plans, site plans, planting plans, grading plans, irrigation plans, lighting plans, stormwater management plans and more for various types of projects such as parks, gardens, campuses, streetscapes, waterfronts, resorts, etc.

Civil Engineering: The application of engineering principles and techniques to the design, construction and maintenance of infrastructure systems such as roads, bridges, tunnels, dams, water supply, drainage, sewerage, etc. Civil engineers can collaborate with landscape architects to ensure the technical feasibility and performance of the landscape design solutions.

Urban Design: The process of shaping the physical form and character of cities and towns through the design of public spaces, buildings, transportation systems, land use patterns and policies. Urban designers can work with landscape architects and civil engineers to create livable, attractive and resilient urban environments that promote

social interaction, economic vitality and environmental quality.

Land Planning: The process of analyzing, evaluating and allocating land resources for different purposes such as residential, commercial, industrial, agricultural, recreational, etc. Land planners can work with landscape architects, civil engineers and urban designers to develop comprehensive plans that balance the needs of various stakeholders and optimize the use of land.
