Abstracts

According to our (Global Info Research) latest study, the global Language Conditioned Robots market size was valued at US\$ 3931 million in 2025 and is forecast to a readjusted size of US\$ 22759 million by 2032 with a CAGR of 28.4% during review period.

In 2025, global language conditioned robots production reached approximately 42,000 units against an installed worldwide capacity of about 56,000 units, with an average unit price USD 91,000, enabling leading manufacturers to achieve typical gross margins of around 40%. Language-conditioned robots are robotic systems whose perception, planning, and control layers are directly driven by natural-language inputs, enabling humans to specify goals such as 'pick up the blue box and place it on the top shelf' and have the robot interpret, reason, and execute the task autonomously using large language models (LLMs) integrated with vision and motion policies. Their supply chain spans upstream AI model providers (OpenAI, Anthropic, Google DeepMind), robotics foundation-model developers (e.g., NVIDIA Isaac, Boston Dynamics AI Institute, Figure AI), and core component suppliers for sensors (RGB-D cameras, LiDAR, tactile arrays), compute (edge AI SoCs, GPUs), and actuators (motors, harmonic drives, power electronics); midstream system integrators and robot OEMs combine these models with hardware platforms (humanoids, mobile manipulators, industrial arms); and downstream deployment flows into logistics, manufacturing, healthcare, retail, and service environments, where value is captured through robot hardware sales, usage-based software licensing, continuous model updates, and vertical-specific application layers.
