Abstracts

According to our (Global Info Research) latest study, the global Lanthanum Hexaboride Filament market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Lanthanum hexaboride filaments (LaB6 Cathodes) are electron emission filaments made of lanthanum hexaboride (LaB6) material. They are a special electron emission material with significant performance advantages. They are mainly used in electron optical systems such as electron microscopes (such as scanning electron microscopes SEM, transmission electron microscopes TEM). Compared with traditional tungsten filaments, they have higher electron emission efficiency and longer service life. Lanthanum hexaboride filaments are widely used in SEM, TEM, X-ray, electron beam lithography and other fields. In these fields, lanthanum hexaboride filaments are highly favored for their high brightness, long life and stable performance. LaB6 filaments installed on commercial SEM and TEM generally have a continuous working life of more than 6 months in a good vacuum environment (such as the vacuum degree of the electron gun is better than 10^{-7} torr).

With the continuous development of electron microscope technology and the expansion of its application fields, the market size of lanthanum hexaboride filaments, as one of the core components of electron microscopes, is also growing steadily. With the increasing demand for high-resolution and high-stability electron microscopes in scientific research and industrial fields, the market demand for lanthanum hexaboride filaments is also increasing. Especially in the fields of materials science, biology, medicine, etc., the demand for high-resolution imaging has driven the development of the lanthanum hexaboride filament market. In addition to the traditional field of electron

microscopy, the application of lanthanum hexaboride filaments is gradually expanding to new fields. For example, in the fields of X-ray diffraction and surface analysis, lanthanum hexaboride filaments are also used as important electron emission sources. In addition, with the rapid development of new energy, new materials and other fields, the application of lanthanum hexaboride filaments in these fields is also worthy of attention. With the increasing demand for high-resolution and high-stability electron microscopes in scientific research and industrial fields and the rapid development of new energy, new materials and other fields, the market prospects of lanthanum hexaboride filaments will become more and more broad.
