Abstracts

According to our (Global Info Research) latest study, the global Laparoscopic Instrument System market size was valued at USD 12780 million in 2023 and is forecast to a readjusted size of USD 25660 million by 2030 with a CAGR of 10.5% during review period.

Laparoscopy invented by George Kelling in 1901, in Germany, is an operation performed in the abdomen or pelvis using small incisions (usually 0.5–1.5 cm) with the aid of a camera. The laparoscope aids diagnosis or therapeutic interventions with a few small cuts in the abdomen.

Laparoscopic surgery, also called minimally invasive surgery (MIS), bandaid surgery, or keyhole surgery, is a modern surgical technique. There are a number of advantages to the patient with laparoscopic surgery versus the more common, open procedure. These include reduced pain due to smaller incisions, reduced hemorrhaging and shorter recovery time. The key element is the use of a laparoscope, a long fiber optic cable system which allows viewing of the affected area by snaking the cable from a more distant, but more easily accessible location.

The Global Info Research report includes an overview of the development of the Laparoscopic Instrument System industry chain, the market status of Endoscopy (Hook, Monopolar), Electrosurgical (Hook, Monopolar), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Laparoscopic Instrument System.
