According to our (Global Info Research) latest study, the global Laparoscopic Needle Holder market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The future market outlook for laparoscopic needle holder is promising due to the increasing demand for minimally invasive surgeries and technological advancements in laparoscopic instruments. The increasing prevalence of chronic diseases and the aging population are the major factors driving the growth of the laparoscopic devices market. The laparoscopic needle holder is a crucial instrument in minimally invasive surgeries, and the increasing number of laparoscopic procedures being performed worldwide is expected to boost the demand for laparoscopic needle holders. Additionally, the development of robotic-assisted surgery and the adoption of laparoendoscopic single-site surgery (LESS) techniques are also expected to drive the growth of the laparoscopic needle holder market in the future.

The laparoscopic needle holder is a surgical instrument specifically designed for minimally invasive surgeries. It is used to grasp and manipulate needles during the surgical procedure. The instrument is long and narrow, with a handle at one end and a pair of jaws at the other end. The jaws are designed to hold and manipulate the suture needle during a laparoscopic procedure. The long length of the instrument allows the surgeon to reach the surgical site through small incisions without requiring large surgical openings. It is often used in procedures such as laparoscopic appendectomy, laparoscopic cholecystectomy, and other minimally invasive surgeries.
