According to our (Global Info Research) latest study, the global Laparoscopic Ultrasound Probe market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The laparoscopic ultrasound probe is an ultrasound device used in laparoscopic surgery. It can be inserted into the abdominal cavity through an abdominal wall puncture cannula, and scan directly with the tissues and organs under examination under the laparoscopic field of view to obtain high-resolution ultrasound images. It can display the internal structure, location, scope, blood flow, etc. of organs and lesions that cannot be directly viewed under laparoscopy, and help diagnose and guide surgical operations. It is suitable for the examination and treatment of abdominal organs such as liver, gallbladder, pancreas, spleen and so on. It is a safe, effective and accurate laparoscopy-assisted technique.
