Abstracts

A laparotomy sponge is an absorbent pad used in surgical procedures on the abdomen. They have a number of applications and are a common inclusion in surgical kits laid out to prepare an operating room for a surgery. Manufacturers typically produce several sizes in packages that may or may not come sterilized, allowing operating room technicians to select the most appropriate options for a given surgical case.

Scope of the Report:

This report focuses on the Laparotomy Sponges in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Some manufacturers make sponges with radio-opaque tapes or strands of thread. The patient can be x-rayed to check for sponges before closing the surgical site, ensuring that any stragglers are caught and addressed. These features can also be useful when a patient has symptoms indicative of a retained sponge, like intense abdominal pain and tenderness; an x-ray can quickly determine if a laparotomy sponge is present or if something else is causing the problem.

The worldwide market for Laparotomy Sponges is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
