Lapping and polishing films are precision-coated abrasive products used for fine surface finishing, typically in industries like electronics, optics, and metallurgy. These films consist of a thin, flexible backing (often polyester) coated with uniformly distributed abrasive particles such as diamond, aluminum oxide, or silicon carbide. Lapping films are used for controlled material removal and flatness, while polishing films provide a smooth, scratch-free finish. They are ideal for applications requiring tight tolerances and consistent surface quality, such as fiber optic connector polishing, semiconductor processing, and metal surface preparation.
