The global Laptop M.2 Series Connector market size is expected to reach \$ 743.6 million by 2030, rising at a market growth of 3.9% CAGR during the forecast period (2024-2030).

M.2 connectors are devices used to interface with M.2 slots, typically found in solid-state drives (SSDs), wireless network cards, Bluetooth modules, and other small electronic devices. These connectors are designed with high-density connections, featuring small form factors and versatility, enabling high-speed data transfer and communication functionalities within electronic devices. These connectors often support various interface standards such as PCI Express (PCIe) and SATA, with different keying and sizes to accommodate different M.2 devices. They are widely used in various computer devices and embedded systems, facilitating efficient data transfer and performance.

M.2 is a specification for internal expansion cards on PC mainboards and notebook computers. M.2 was conceived as a successor of the mSATA interface and for the first time introduced by Intel in 2012 under the label Next Generation Form Factor (NGFF).
