Abstracts

The global Large Aircraft Auxiliary Power Unit market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The auxiliary power system of large aviation aircraft is a very important part of the crew. It is an independent system that provides emergency power support after the power of the main body fails, which directly affects flight safety. Its main function is to independently provide electricity and compressed air to the aircraft. The APU of a large aircraft can provide additional thrust to the aircraft, and the APU of a large aircraft has higher technical requirements for the manufacturer. At present, the major APU manufacturers in the world are mainly American manufacturers, including Safran, PBS Velka Aerospace, Honey Aerospace, Pratt & Whitney and Aerosila, etc. Overall, due to technical barriers, it is still in an oligopoly market situation.

The main purpose is to allow the main engine of a large aircraft to supply power without relying on ground equipment when it is stopped. It is a complete independent system in the power plant, but it is integrated with the whole aircraft in terms of control. On a modern large passenger aircraft, the APU is the main equipment to ensure that the engine is restarted after being stopped in the air, and it directly affects flight safety.
