## Abstracts

The global Large Energy Storage Equipment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

China and the United States are the main markets for large-scale energy storage equipment, and the European market is also gradually starting. In 2022, China's new installed capacity will be 14.6GWh, and it is expected that the newly installed capacity will reach 111.7GWh in 2025. The demand for large-scale energy storage equipment mainly comes from wind power and the demand for flexible resources generated by the high proportion of photovoltaics connected to the grid. China has adopted strong allocation policies + market construction, and Europe and the United States have gradually improved the business model of large-scale energy storage projects through subsidy incentives + market-oriented reporting, the installed capacity continues to increase. From the perspective of technology, pumped hydro storage has a large scale, and lithium battery energy storage is the main increase.

Different from low-power energy storage for household use, the energy storage power used in new energy power stations, power grids and other scenarios is higher, referred to as 'large storage'. The role of large-scale energy storage equipment is mainly to adjust power peaks, alleviate grid congestion, and delay transmission and distribution expansion.
