The large flow sand mill is a highly efficient wet grinding equipment, suitable for processing materials with high viscosity and high fineness requirements. Its main principle is to use the high-speed rotating rotor to drive the grinding media (such as ceramic beads, steel balls, etc.) to collide and rub with the material in the grinding chamber at high speed, thereby achieving material refinement, dispersion and homogenization. The design of the large flow sand mill allows for higher material flow processing, can achieve higher fine grinding effects in a shorter time, and has the advantages of high efficiency, energy saving, and good stability.
