A large format overhead scanner is a type of scanning device. It's designed to scan relatively large - sized objects or documents such as large - scale engineering drawings, maps, calligraphy and paintings, and archival files, with a format not less than A3. The 'overhead' design means that the scanning component is positioned above the object to be scanned. This structural design makes it more convenient to scan large, heavy, or immobile objects. During operation, it uses a high - precision optical system and sensors to capture the image information on the surface of the object. It can convert this information into digital image data and allows users to set parameters such as scanning resolution and color mode according to different requirements, thus obtaining high - quality scanning results to meet the needs of many fields such as archival digitization, art reproduction, and the preservation of architectural design drawings.
