Abstracts

According to our (Global Info Research) latest study, the global Large FOV Dental Extraoral CBCT market size was valued at USD 997.9 million in 2022 and is forecast to a readjusted size of USD 1478.9 million by 2029 with a CAGR of 5.8% during review period.

The advantages of CBCT are more detailed images due to smaller voxel size, thinner slice thickness, minimal artifacts, and lower radiation dose. Dental CBCT is widely used in various clinical applications such as oral implantation, orthodontics, and endodontic treatment. It has many advantages such as high resolution, fast scanning speed, low radiation dose, good reconstruction effect, and high three-dimensional imaging accuracy. CBCT can Allow dentists to make more detailed assessments of teeth and other oral tissues (compared to flat X-ray images), greatly increasing diagnostic accuracy.

Globally, the proportion of people over the age of 55 who needed basic dental care was 16.8% (1.2 billion people) in 2015, and is expected to reach 26.8% (2.6 billion people) in 2050. In particular, East Asian regions such as South Korea, Japan and China are experiencing rapid population aging. The increase in the geriatric population is the major demand for diagnosis of various periodontal diseases and the rapidly growing implant market, which is also having a close impact on the dental radiography equipment market. The global market size for dental implants (a diagnostic procedure using dental radiography equipment) is estimated at \$4.6 billion and is expected to grow at an average annual rate of 8% from 2023 to 2029. The main growth factors are summarized as aging populations, rising incomes in emerging countries, increasing number of dentists able to perform implant surgeries, falling costs of implant surgeries,

implementation of implant insurance coverage systems, and digital solutions that increase treatment efficiency due to the introduction of dental implants. For example, after the domestic centralized purchasing of dental implants starts to reduce prices in 2023, its penetration rate is expected to increase rapidly, and at the same time, it will accelerate the release of demand for domestic oral CBCT and other testing equipment. Oral CBCT has almost become a necessary imaging examination equipment for dental medical institutions (especially those carrying out implant and orthodontic projects).

As the demand for high-end dental treatments such as implants and orthodontics increases, the market for related dental X-ray equipment also grows. As competition among dental hospitals and clinics intensifies, the need for advanced dental X-ray equipment for differentiated treatment is increasing. Increase. At the same time, the market growth rate in Europe, the Middle East, and the Asia-Pacific region continues to increase, and the dental care market is closely related to income levels. Therefore, emerging countries in the Asia-Pacific region with a higher proportion will have greater growth rates in the future.

In addition, as medical needs change and the dental implant and cosmetic dentistry markets continue to expand, the market for external imaging equipment is growing significantly. In addition, as the prices of major X-ray raw materials rise, the replacement of existing film equipment by digital equipment is accelerating, which can be said to be a growth factor.
