A Large Medical Waste Incinerator is a type of medical waste treatment facility that uses high-temperature combustion to safely eliminate hazardous and infectious materials from healthcare facilities. This process is essential for the responsible and efficient management of medical waste, which includes solid or liquid waste contaminated with blood, human body fluids, or other potentially infectious substances. The incineration process takes place in a specialized chamber where waste is burned at extremely high temperatures, typically between 1,800°F to 2,200°F (982°C to 1204°C), to break down complex chemical bonds, converting the waste into gas and ash, thereby reducing the risk of contamination and disease spread.
