Large model RAG tools are a class of AI software tools and platforms built around Retrieval-Augmented Generation. Their core function is to retrieve relevant information from enterprise knowledge bases, databases, document libraries, web pages, code repositories, knowledge graphs, or business systems before the large language model generates answers. The retrieval results are then used as context input to the model, thereby improving the accuracy, timeliness, traceability, and business relevance of the answers. Application scenarios include enterprise knowledge base question answering, intelligent customer service, legal/financial/medical document retrieval, R&D knowledge management, code question answering, sales support, report generation, content summarization, compliance review, education and training, and internal search. Gross profit margin is approximately 45%~80%.
