Abstracts

The global Large Ni-MH Battery market size is expected to reach \$ 1200 million by 2032, rising at a market growth of 5.3% CAGR during the forecast period (2026-2032).

Large Ni-MH battery refers to high-power, high-capacity secondary battery systems designed for Hybrid Electric Vehicles (HEVs), rail transit, or heavy industrial equipment. Characterized by high power density, exceptional thermal safety (non-flammable aqueous electrolyte), and extended cycle life, it serves as the critical unit for energy recuperation and power assistance. In 2025, global sales of large Ni-MH battery for electric vehicles reached 2.72 GWh, with an average selling price of approximately USD 300 per kWh. The industrial chain of large-scale nickel-metal hydride (NiMH) batteries mainly consists of three segments: upstream raw materials and key material supply, midstream battery manufacturing, and downstream application markets. The upstream segment includes suppliers of nickel, rare earth metals (such as lanthanum, cerium, praseodymium, and neodymium), as well as key materials such as electrolytes, separators, and hydrogen storage alloys. The midstream segment comprises manufacturers of large NiMH battery cells and battery systems, responsible for battery design, production, and system integration. The downstream segment mainly involves applications in hybrid vehicles, rail transit energy storage, power grid frequency regulation, and industrial energy storage. Overall, the industry chain is based on metal resources and functional materials, centered on battery manufacturing, and ultimately serves the electrification of transportation and energy storage markets.
