The global Large Payload Unmanned Helicopter market size is expected to reach \$ 53170 million by 2029, rising at a market growth of 8.5% CAGR during the forecast period (2023-2029).

Large payload unmanned helicopter (UAV) is a type of unmanned aerial vehicle specially designed to carry and transport larger loads. These helicopters are designed to meet the demand for lift capacity and mission diversity, making them suitable for a variety of application scenarios. Large-load unmanned helicopters are usually able to carry large loads such as sensors, equipment, and cargo, perform long-term missions, or operate in environments that require vertical takeoff and landing. One of the future development trends of large-load unmanned helicopters is to improve their payload capacity and flight time. This would make it more suitable for missions that require long stays in the air and carrying more equipment. The development trend in the field of large-load unmanned helicopters is towards improving performance, increasing intelligence and adaptability, and expanding application fields. These trends will promote technological innovation and enable large-payload unmanned helicopters to better meet the diverse needs of the future.
