The global Large Pump for Sewage Drainage market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Sewage pump is a kind of centrifugal impurity pump, which has many forms, such as submersible type and dry type. The most common submersible type is QW submersible sewage pump, and the most common dry sewage pump is W horizontal sewage pump and WL vertical sewage pump. It is mainly used to transport urban sewage, and fiber is contained in dung or liquid. The temperature of the medium for solid particles such as paper scraps is usually not greater than 80 °. Because the medium to be conveyed contains fibers that are easy to be twisted or bunched. Therefore, the flow passage of the pump is easy to be blocked. Once the pump is blocked, the pump will not work normally, or even burn the motor, resulting in poor drainage. It has a serious impact on urban life and environmental protection. Therefore, plugging resistance and reliability are important factors for the quality of sewage pump.
