Abstracts

According to our (Global Info Research) latest study, the global Large Size Solar Cells market size was valued at US\$ 22723 million in 2025 and is forecast to a readjusted size of US\$ 31034 million by 2032 with a CAGR of 4.6% during review period.

Large-size solar cells refer to commercialized crystalline-silicon PV cells built mainly on wafer platforms of 182 mm and above, with three mainstream format families: 18X/M10 (182?183.75 mm), 210R rectangular formats (such as 182?210, 182.2?191.6, and 182?199), and 210/G12 (210?210). The relevant technology routes include TOPCon, HJT, and BC (including HPBC/ABC/TBC). In the value chain, these cells sit between polysilicon/wafers and modules, and their direct downstream customers are primarily module manufacturers, while end demand comes from utility-scale projects, C&I rooftops, and residential rooftops. In 2025, China?s TOPCon cell prices briefly moved above RMB 0.30/W before falling back to RMB 0.23?0.24/W; at the same time, FOB China M10 TOPCon was around US\$0.0311/W. Under this pricing pressure, gross margins across commodity cell manufacturing were severely compressed.
