Large Sonic Drilling Rig is an advanced drilling equipment that uses the combination of high-frequency vibration and rotary force to efficiently cut into soil layers or soft rocks. The core component is the vibrating head, which can generate high-frequency vibration and low-speed rotation. Combined with the downward pressure, it enables the drill string and the annular drill bit to continuously advance into the rock and soil. This technology not only increases the drilling speed but also significantly reduces the impact on the surrounding environment. It is suitable for drilling operations under various geological conditions, including geological exploration, environmental monitoring and engineering construction, etc.
