## Abstracts

According to our (Global Info Research) latest study, the global Large Swing Electric Toothbrush market size was valued at US\$ 299 million in 2025 and is forecast to a readjusted size of US\$ 474 million by 2032 with a CAGR of 7.1% during review period.

The wide-angle electric toothbrush is an electric toothbrush that uses a large-angle oscillation cleaning mode. Unlike traditional sonic or small-amplitude rotating toothbrushes, it simulates the action of manual brushing by oscillating the brush head left and right or up and down with large amplitude, combined with high-speed vibration, to achieve a stronger plaque removal effect. Traditional electric toothbrushes have a limited cleaning range and easily miss the edges of teeth and the gum line. The wide-angle electric toothbrush improves coverage and reduces cleaning blind spots through a larger oscillation angle, significantly improving the plaque removal effect. The average price of this product is about US\$110 per unit, and global sales are about 2.6 million units. The upstream components are the motor, lithium battery, and bristle material (nylon/biodegradable material). The future trend is the combination of wide oscillation and intelligent technology, which will improve the user experience through stronger cleaning power and data feedback. At the same time, environmentally friendly materials and children's models will become new growth points. The wide-angle electric toothbrush is an innovative niche market of electric toothbrushes, solving the problem of cleaning blind spots of traditional toothbrushes. Although the market size is small, it is growing rapidly and will become an important direction for intelligent oral care and children's oral health in the future.
