The large temperature difference air conditioning chilled water system is an efficient cooling solution that significantly improves the energy efficiency of the system by increasing the temperature difference between the supply water and the return water (usually up to 10°C or more). This system is widely used in commercial buildings, data centers, hospitals and large public facilities, which can effectively reduce energy consumption and reduce operating costs. It uses more efficient chillers and heat exchangers, which can transfer the same amount of heat at a lower flow rate, reducing the workload and power consumption of the water pump.
