The large temperature difference central air conditioning system is an efficient cooling and heating solution that improves the energy efficiency of the system by significantly increasing the temperature difference between the supply water and the return water. This design reduces the amount of circulating water and the power consumption of the water pump, reducing the overall operating cost, and is widely used in commercial buildings, data centers, hospitals and large public facilities. The large temperature difference system uses advanced frequency conversion technology and intelligent control system to dynamically adjust the water supply temperature and flow according to real-time load demand to ensure stable and efficient cooling or heating performance.
