Large vertical electrophoresis tank is an experimental device for protein or nucleic acid separation. It adopts a vertically placed gel plate structure and is suitable for electrophoresis techniques such as SDS-polyacrylamide gel electrophoresis (SDS-PAGE). Its design allows multiple gels to be run simultaneously, improves experimental efficiency, and supports large sample volumes and high-throughput analysis. Large vertical electrophoresis tanks are usually equipped with efficient cooling systems and adjustable voltage/current control to ensure the stability and separation effect of the electrophoresis process. It is widely used in molecular biology, proteomics and biochemistry research, and is particularly suitable for large-scale experiments that require high resolution and repeatability.
