According to our (Global Info Research) latest study, the global Larvicides market size was valued at USD 688.3 million in 2023 and is forecast to a readjusted size of USD 889.5 million by 2030 with a CAGR of 3.7% during review period.

A larvicide (alternatively larvacide) is an insecticide that is specifically targeted against the larval life stage of an insect. Their most common use is against mosquitoes. Larvicides may be contact poisons, stomach poisons, growth regulators, or (increasingly) biological control agents.

North America accounted for the largest market share in 2017, followed by Europe. North America is estimated to be the world's largest market for pest control products, with the presence of many multinational and national companies in the region. Regions such as Asia Pacific, South America, and Africa and the Middle East are also witnessing an increase in demand for larvicides due to an increase in incidences of diseases, the prevalence of stringent hygiene & food safety legislation, IPM practices, and the growing middle-class population.
