## Abstracts

The global Laser 3D Camera market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Laser 3D camera is a type of 3D scanner that uses a laser beam to project a line or a pattern onto an object and then captures the reflected light with a camera. By measuring the distortion or displacement of the laser line or pattern, the camera can calculate the depth or distance of each point on the object's surface and create a 3D point cloud of the object. This process is also known as 3D triangulation.

This report studies the global Laser 3D Camera production, demand, key manufacturers, and key regions.
