## Abstracts

The global Laser 3D Scanner market size is expected to reach \$ 9917.9 million by 2029, rising at a market growth of 9.8% CAGR during the forecast period (2023-2029).

3D Laser Scanning is a non-contact, non-destructive technology that digitally captures the shape of physical objects using a line of laser light. 3D laser scanners create “point clouds” of data from the surface of an object. In other words, 3D laser scanning is a way to capture a physical object’s exact size and shape into the computer world as a digital 3-dimensional representation.

3D laser scanners measure fine details and capture free-form shapes to quickly generate highly accurate point clouds. 3D laser scanning is ideally suited to the measurement and inspection of contoured surfaces and complex geometries which require massive amounts of data for their accurate description and where doing this is impractical with the use of traditional measurement methods or a touch probe.

This report studies the global Laser 3D Scanner production, demand, key manufacturers, and key regions.
