According to our (Global Info Research) latest study, the global Laser Aerosol Particle Size Spectrometer market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Laser Aerosol Particle Sizer (LAPS) is an instrument used to measure the size distribution of aerosol particles. It is based on the principle of laser scattering. It irradiates laser light onto aerosol particles, measures the intensity and angle of the scattered light, and then infers the size of the aerosol particles. Laser aerosol particle size spectrometers can provide detailed information about aerosol particle size distribution, including the number concentration and size range of particles.
