Abstracts

According to our (Global Info Research) latest study, the global Laser Beam Expander Lens market size was valued at US\$ 112 million in 2025 and is forecast to a readjusted size of US\$ 186 million by 2032 with a CAGR of 7.5% during review period.

A Laser Beam Expander Lens is an afocal optical assembly used to increase the diameter of an incoming collimated laser beam and, at the same time, reduce its beam divergence or optimize the focused spot size after downstream focusing optics. In a laser system, it is normally installed between the laser source and the focusing lens, scan lens or processing head, and is selected according to laser wavelength, expansion ratio, input beam diameter, output clear aperture, power level and beam-quality requirements. Structurally, it is usually based on Galilean, Keplerian or reflective telescope configurations rather than a single optical lens.

The upstream raw materials of Laser Beam Expander Lenses mainly include optical substrates, coating materials and mechanical housing materials. Downstream, Laser Beam Expanders are mainly used in industrial laser processing equipment, semiconductor and PCB manufacturing, laser marking and drilling systems, laser ranging and remote sensing, optical metrology, spectroscopy, microscopy and laboratory photonics systems.

In 2025, global sales of Laser Beam Expander Lens reached approximately 209 K units, with an average global market price of around US\$ 520/unit. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 30% to 50%.
