According to our (Global Info Research) latest study, the global Laser Beam Intrusion Detector market size was valued at US\$ 537 million in 2025 and is forecast to a readjusted size of US\$ 868 million by 2032 with a CAGR of 7.2% during review period.

Laser beam intrusion detector is an active security device based on laser technology. It consists of a laser transmitter and a laser receiver. It can block the alarm to close the perimeter, plane or three-dimensional space. It uses the monochromaticity, high energy density and strong penetration of the laser beam to achieve long-distance and high-sensitivity intrusion detection. It has the advantages of long detection distance, low false alarm rate, strong anti-interference and adaptability to harsh environments. It is widely used in perimeter security, industrial monitoring, military facilities and other scenes with high security requirements.
