Abstracts

Laser capture microdissection (LCM) is an automated sample preparation technique that enables isolation of specific cells from a mixed population under microscopic visualization. This technique of isolating a pure sample from a heterogeneous mixture allows for more efficient and accurate results with downstream microgenomics applications such as next-generation sequencing, Sanger sequencing, PCR, and proteomic.

Scope of the Report:

This report focuses on the Laser Capture Microdissection in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Global giant manufactures mainly distributed in Germany. The manufacturers in Germany have a long history and unshakable status in this field. Manufacturers such as leica microsystems have relative higher level of product's quality. As to Germany, leica microsystems has become as a global leader. There is only one company in USA, it occupy about 15% of the global production market share. But it has a large amount of consumption.

Many companies have several branch office, usually locate in the place close to aimed consumption region. There are international companies set up branch office in China either. Some companies usually take a joint venture enter into aim market, like leica microsystems who take their advantage merge with US company, whose key market is in US.

The key consumption markets locate at developed countries. The North America takes the market share of about 30%, followed by EU with 25%. China takes the market share

of about 20%

We tend to believe this industry becomes more and more mature, and the consumption increasing rate will show a smooth curve.

The worldwide market for Laser Capture Microdissection is expected to grow at a CAGR of roughly 7.1% over the next five years, will reach 170 million US\$ in 2023, from 110 million US\$ in 2017, according to a new GIR (Global Info Research) study.
