## Abstracts

According to our (Global Info Research) latest study, the global Laser Cavity Mirror market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Laser cavity mirrors refer to the mirrors used to form a laser resonant cavity. They can control the frequency, phase and directionality of the laser. Laser cavity mirrors generally come in two types: rearview mirrors and output couplers. The rearview mirror is a highly reflective mirror used to maintain photon oscillation within the cavity. The output coupler is a partially reflective mirror used to extract a portion of the laser beam from the cavity. The reflectivity, transmittance, absorption rate and scattering rate of the laser cavity mirror will all affect the output efficiency and stability of the laser.
