According to our (Global Info Research) latest study, the global Laser Chips market size was valued at USD 3133.2 million in 2023 and is forecast to a readjusted size of USD 7026.8 million by 2030 with a CAGR of 12.2% during review period.

In optical devices, optical chips are used for the conversion of photoelectric signals. According to the type of light emission, it is divided into surface emission and side emission. Among them, surface-emitting lasers are mainly VCSEL (vertical cavity surface-emitting lasers); there are many types of edge-emitting lasers, including FP (Fabry–Pérot, Fabry-Perot laser), DFB (Distributed Feedback Laser, distributed feedback laser) Lasers) and EML (Electroabsorption Modulated Laser), traditional FP laser chips have gradually narrowed their applications in the field of optical communication due to large losses and short transmission distances. There are three main types of core laser chips: DFB and EML And VCSEL.

In terms of regions, APAC is expected to remain the largest market during the forecast period.
