The global Laser Cleaning Machinery market size is expected to reach \$ 812 million by 2032, rising at a market growth of 10.6% CAGR during the forecast period (2026-2032).

Laser cleaning machinery utilize high-energy laser beams for non-contact cleaning of surfaces. Using rapidly focused laser pulses, laser cleaning machinery can precisely remove oxides, coatings, oils, rust, and other contaminants from the surfaces of materials such as metals, plastics, and ceramics without damaging the substrate. This cleaning method, characterized by its high efficiency, environmental friendliness, and non-destructive nature, is widely used in the automotive, shipbuilding, aerospace, machining, and electronics industries. Global production of laser cleaning machinery reached 7,572 units in 2025. Upstream raw materials/components include: laser sources (core components): pulsed/continuous fiber lasers, laser diode arrays, and ytterbium-doped active optical fibers. Suppliers include IPG Photonics, TRUMPF, nLIGHT, Raycus, Maxphotonics, JPT, and Coherent (formerly part of II-VI/Lumentum). IPG, TRUMPF, and others have publicly disclosed 'laser cleaning' application solutions; Raycus also lists cleaning scenarios such as cultural heritage preservation and semiconductors. Optical components and beam transmission: F-Theta scan lenses, beam expanders, reflectors/protective lenses, QBH fiber connectors, processing heads, etc. Suppliers: Jenoptik (JENar?/Silverline? F-Theta), Coherent (laser optics), Thorlabs, Edmund Optics; Processing heads/optical path components: Precitec, Laser Mechanisms, etc. Galvo scanning systems: dual-axis/tri-axis galvanometers, drive and control boards. Suppliers: SCANLAB (Germany) and SINO-GALVO (China). Both companies clearly cover applications such as 'laser cleaning.'

In recent years, with increasing automation in the manufacturing industry, stricter environmental regulations, and growing demand for surface treatment across the

industrial chain, laser cleaning technology is gradually emerging as a key alternative to traditional methods like sandblasting and chemical cleaning, becoming a valuable alternative in the industrial cleaning/surface pretreatment sector. The global laser cleaning market is steadily expanding. The manufacturing industry, particularly in the automotive, battery, new energy, aerospace, and heavy industry sectors, is increasingly demanding higher precision and efficiency in surface pretreatment, rust removal, and pre-weld cleaning, driving demand for laser cleaning machinery.
