In terms of product type, Fiber Laser Cutting Machine occupies the largest share of the total market, over 50%. And in terms of application, the largest application is Automotive, followed by Machine Industry.

Laser cutting is a technology that uses a laser to cut materials. Laser cutting works by directing the output of a high-power laser most commonly through optics. The laser optics and CNC (computer numerical control) are used to direct the material or the laser beam generated. The laser cutting machines initially casts laser beam on the surface of work piece, melts it and finally evaporates the particular area of work piece using the energy released by laser.
